Meet The Professor Optimizing the Management of Acute Myeloid Leukemia

Naval Daver, MD

Director, Leukemia Research Alliance Program Associate Professor Department of Leukemia The University of Texas MD Anderson Cancer Center Houston, Texas

Commercial Support

This activity is supported by educational grants from Bristol-Myers Squibb Company, Genentech, a member of the Roche Group, and Servier Pharmaceuticals LLC.

Dr Love — Disclosures

Dr Love is president and CEO of Research To Practice. Research To Practice receives funds in the form of educational grants to develop CME activities from the following companies: AbbVie Inc, Adaptive Biotechnologies Corporation, ADC Therapeutics, Agios Pharmaceuticals Inc, Alexion Pharmaceuticals, Amgen Inc, Array BioPharma Inc, a subsidiary of Pfizer Inc, Astellas, AstraZeneca Pharmaceuticals LP, Aveo Pharmaceuticals, Bayer HealthCare Pharmaceuticals, BeiGene Ltd, BeyondSpring Pharmaceuticals Inc, Blueprint Medicines, Boehringer Ingelheim Pharmaceuticals Inc, Bristol-Myers Squibb Company, Celgene Corporation, Clovis Oncology, Coherus BioSciences, Daiichi Sankyo Inc, Eisai Inc, Epizyme Inc, Exact Sciences Inc, Exelixis Inc, Five Prime Therapeutics Inc, Foundation Medicine, G1 Therapeutics Inc, Genentech, a member of the Roche Group, Genmab, Gilead Sciences Inc, GlaxoSmithKline, Grail Inc, Halozyme Inc, Helsinn Healthcare SA, ImmunoGen Inc, Incyte Corporation, Ipsen Biopharmaceuticals Inc, Janssen Biotech Inc, administered by Janssen Scientific Affairs LLC, Jazz Pharmaceuticals Inc, Karyopharm Therapeutics, Kite, A Gilead Company, Lilly, Loxo Oncology Inc, a wholly owned subsidiary of Eli Lilly & Company, Merck, Natera Inc, Novartis, Novocure Inc, Oncopeptides, Pfizer Inc, Pharmacyclics LLC, an AbbVie Company, Puma Biotechnology Inc, Regeneron Pharmaceuticals Inc, Sanofi Genzyme, Seagen Inc, Servier Pharmaceuticals LLC, Sumitomo Dainippon Pharma Oncology Inc, Taiho Oncology Inc, Takeda Pharmaceuticals USA Inc, Tesaro, A GSK Company, TG Therapeutics Inc, Turning Point Therapeutics Inc, Verastem Inc and Zymeworks Inc.

Research To Practice CME Planning Committee Members, Staff and Reviewers

Planners, scientific staff and independent reviewers for Research To Practice have no relevant conflicts of interest to disclose.

Prashant Sharma, MD Intermountain Healthcare Salt Lake City, Utah

Rebecca L Olin, MD, MSCE University of California, San Francisco San Francisco, California

Do you generally admit to the hospital all patients with AML who are receiving venetoclax in combination with a hypomethylating agent (HMA)?

Agenda

Module 1: Introduction

Module 2: Case Presentations

- Dr S Gupta: A 78-year-old man with AML and a TP53 mutation
- Dr Olin: A 40-year-old woman with relapsed AML
- Dr Sharma: A 33-year-old woman with therapy-related core binding factor (CBF) AML
- Dr Rupard: A 71-year-old man with AML and an IDH2 mutation
- Dr Sharma: A 67-year-old woman with AML and a FLT3-ITD mutation
- Dr R Gupta: A 78-year-old man with AML and an IDH2 mutation

Module 3: ASH 2021 Review

Module 4: Faculty Survey

Module 5: Journal Club with Dr Daver

Module 6: Appendix

Harnessing the benefits of available targeted therapies in acute myeloid leukaemia

Hagop Kantarjian, Nicholas J Short, Courtney DiNardo, Eytan M Stein, Naval Daver, Alexander E Perl, Eunice S Wang, Andrew Wei, Martin Tallman

Quizartinib Added to Chemotherapy Demonstrates Superior Overall Survival Compared to Chemotherapy Alone for Adult Patients with Newly Diagnosed FLT3-ITD Positive AML Press Release: November 18, 2021

"Positive topline results [were announced] from the global pivotal QuANTUM-First phase 3 trial evaluating quizartinib, a highly potent and selective FLT3 inhibitor, in patients with newly diagnosed *FLT3*-ITD positive acute myeloid leukemia (AML).

QuANTUM-First met its primary endpoint, demonstrating that patients who received quizartinib in combination with standard induction and consolidation chemotherapy and then continued with single agent quizartinib had a statistically significant and clinically meaningful improvement in overall survival (OS) compared to those who received standard treatment alone. The safety of quizartinib was shown to be manageable and consistent with the known safety profile."

https://www.businesswire.com/news/home/20211118006328/en/Quizartinib-Added-to-Chemotherapy-Demonstrates-Superior-Overall-Survival-Compared-to-Chemotherapy-Alone-in-Adult-Patients-with-Newly-Diagnosed-FLT3-ITD-Positive-AML

Agenda

Module 1: Introduction

Module 2: Case Presentations

- Dr S Gupta: A 78-year-old man with AML and a TP53 mutation
- Dr Olin: A 40-year-old woman with relapsed AML
- Dr Sharma: A 33-year-old woman with therapy-related core binding factor (CBF) AML
- Dr Rupard: A 71-year-old man with AML and an IDH2 mutation
- Dr Sharma: A 67-year-old woman with AML and a FLT3-ITD mutation
- Dr R Gupta: A 78-year-old man with AML and an IDH2 mutation

Module 3: ASH 2021 Review

Module 4: Faculty Survey

Module 5: Journal Club with Dr Daver

Module 6: Appendix

Case Presentation – Dr Gupta: A 78-year-old man with AML and a TP53 mutation

- WBC borderline: 3.5, low hemoglobin, macrocytosis
- BMB: 60% blasts
- FISH and NGS: Complex cytogenetics, including TP53 mutation
- Decitabine/venetoclax 200 mg/d
- BMB on C1, d22: 10%
- Fluconazole

Questions

- Even though he is not receiving the full dose of venetoclax, should I further dose reduce when starting fluconazole?
- Should I have waited until day 28 to repeat the bone marrow biopsy?
- How do you approach treatment for patients with TP53 mutations, knowing that they may not respond for very long?

Dr Shaachi Gupta

Case Presentation – Dr Olin: A 40-year-old woman with relapsed AML

Dr Rebecca Olin

- 2017: Diagnosed with AML and t(6;11) without actionable mutations
- 7 + 3 \rightarrow Consolidation HiDAC x 4
- Late 2020: Increasing pancytopenia
- BMB: Relapsed AML and t(6;11)
- Molecular genetics: NRAS, PTPN11, KRAS, WT1 mutations

Case Presentation – Dr Olin: A 40-year-old woman with relapsed AML (continued)

- 2017: Diagnosed with AML and t(6;11) without actionable mutations
- 7 + 3 \rightarrow Consolidation HiDAC x 4
- Late 2020: Increasing pancytopenia
- BMB: Relapsed AML and t(6;11)
- Molecular genetics: NRAS, PTPN11, KRAS, WT1 mutations
- FLAG-IDA + venetoclax, with CR → Allogeneic SCT

Questions

- What are your thoughts about the FLAG-IDA/venetoclax regimen?
- Are you using this regimen more often or waiting for more data to emerge?

Dr Rebecca Olin

Case Presentation – Dr Sharma: A 33-year-old woman with therapy-related core binding factor (CBF) AML

- PMH: Right breast IDC, s/p lumpectomy, SLNB, adjuvant TC → ACT, RT, tamoxifen in 2019
- 4/2020: Presented with a "boil" on left axilla
- CBC: WBC 17,000, ANC 900, Hgb 6.5, Plts 55,000
- BMB: CBF t-AML, with 28% blasts, INV16, NRAS-positive, JAK2 mutation
- Thrombocytopenia, transfusion dependent
- 7 + 3 due to refractory thrombocytopenia, with morphological CR \rightarrow Consolidation HiDAC
 - Gemtuzumab ozogamicin (GO) not added due to thrombocytopenia
- Due to complications, she was not transplant eligible \rightarrow Continue HiDAC consolidation x 2 \rightarrow CC-486

Questions

• What is the best approach to treatment in a younger patient with CBF AML, particularly therapyrelated AML?

Dr Prashant Sharma

Case Presentation – Dr Rupard: A 71-year-old man with AML and an IDH2 mutation

Dr Erik Rupard

- Presents with fatigue, weakness and WBC 40,000
- BMB: 90% cellular, with 30% blasts
- Cytogenetics and FISH: WNL
- NGS: IDH2 mutation, RUNX1, SRSF2 and ASXL1 mutations
- Liposomal daunorubicin/cytarabine, with CR in 2 months, but relapses 8 months later
- Enasidenib, with a durable partial response

Questions

- What has been your experience with liposomal daunorubicin/cytarabine?
- Is this typical for AML to relapse in 8 months?
- What is the role of targeted agents, such as enasidenib, in treating these patients?

Case Presentation – Dr Sharma: A 67-year-old woman with AML and a FLT3-ITD mutation

- Presents with fatigue, pancytopenia
- AML, FLT3-ITD mutation

Dr Prashant Sharma

- 7 + 3 + midostaurin → Consolidation HiDAC + midostaurin c/b severe cytopenias, sepsis, FTT, CMV viremia
- Patient declines further chemotherapy and transplant
- EOT BMB: NED, with negative flow
- Gilteritinib 120 mg/d \rightarrow Cytopenias \rightarrow Dose reduced to 80 mg/d x 7 months
- BMB: Relapse
- Azacitidine/venetoclax, with CR

Question

- Would you have treated the patient differently?
- What is your opinion on gilteritinib in combination with induction chemotherapy for patients with FLT3-positive ITD mutation? How would you manage these patients post-transplant? Would you use gilteritinib?

Case Presentation – Dr Gupta: A 78-year-old man with AML and an IDH2 mutation

- PMH: Rectal cancer
- Newly diagnosed with AML (ECOG PS 1)
- Azacitidine/venetoclax
- Molecular testing: IDH2 mutation

Questions

- Would you continue azacitidine/venetoclax and only consider IDH2 inhibitors at relapse?
- Are there guidelines for IDH inhibitor-related differentiation syndrome? What happens if the patient continues to have differentiation syndrome despite maximal supportive care?

Dr Ranju Gupta

Agenda

Module 1: Introduction

Module 2: Case Presentations

- Dr S Gupta: A 78-year-old man with AML and a TP53 mutation
- Dr Olin: A 40-year-old woman with relapsed AML
- Dr Sharma: A 33-year-old woman with therapy-related core binding factor (CBF) AML
- Dr Rupard: A 71-year-old man with AML and an IDH2 mutation
- Dr Sharma: A 67-year-old woman with AML and a FLT3-ITD mutation
- Dr R Gupta: A 78-year-old man with AML and an IDH2 mutation

Module 3: ASH 2021 Review

Module 4: Faculty Survey

Module 3: ASH 2021 Review

Module 4: Faculty Survey

Module 5: Journal Club with Dr Daver

Module 6: Appendix

In what clinical situations, if any, do you recommend HMA/ venetoclax for a patient with AML who is <u>eligible</u> for intensive chemotherapy (eg, adverse cytogenetics)?

HMA = hypomethylating agent; tAML = treatment-related AML

A 65-year-old patient with intermediate-risk AML, no actionable mutations, PS 0, receives 7 + 3 induction therapy, achieves a complete remission after 2 cycles and then receives 2 cycles of high-dose cytarabine consolidation but declines transplant. Would you offer this patient maintenance therapy?

Dr Daver	Yes, azacitidine + venetoclax or CC-486	Dr Pratz	Yes, CC-486
Dr Fathi	Yes, CC-486	Dr Stein	Yes, CC-486
Dr Olin	Yes, CC-486	Dr Stock	Yes, CC-486
Dr Pollyea	Yes, CC-486	Prof Wei	Yes, CC-486

Have you administered or would you administer CC-486 (oral azacitidine) as maintenance therapy to a patient who has undergone stem cell transplant?

Regulatory and reimbursement issues aside, what initial treatment would you recommend for a <u>younger patient who is eligible for intensive</u> <u>chemotherapy</u> who presents with AML and a <u>FLT3-ITD mutation</u>?

CLIA = trial regimen, cladribine, high-dose cytarabine and idarubicin

Regulatory and reimbursement issues aside, what initial treatment would you recommend for an <u>older patient who is not eligible for intensive</u> <u>chemotherapy</u> who presents with AML and a <u>FLT3-ITD mutation</u>?

HMA: azacitidine or decitabine

Regulatory and reimbursement issues aside, what initial treatment would you recommend for a <u>younger patient who is eligible for intensive</u> <u>chemotherapy</u> who presents with AML and an <u>IDH1 mutation</u>?

Regulatory and reimbursement issues aside, what initial treatment would you recommend for an <u>older patient who is not eligible for intensive</u> <u>chemotherapy</u> who presents with AML and an <u>IDH1 mutation</u>?

HMA: azacitidine or decitabine

Module 5: Journal Club with Dr Daver

Regulatory and reimbursement issues aside, in general, what is your preferred initial treatment for a patient with AML with no actionable mutations who is not eligible for intensive chemotherapy?

HMA: azacitidine or decitabine

Do you generally admit to the hospital all patients with AML who are receiving venetoclax in combination with a hypomethylating agent (HMA)?

For a patient with AML who is pancytopenic and is receiving venetoclax in combination with an HMA or low-dose cytarabine(LDAC), when do you perform the first bone marrow evaluation?

For a patient with AML who is receiving venetoclax in combination with an HMA and is responding to and tolerating treatment, for how long do you generally continue therapy?

Regulatory and reimbursement issues aside, what would you generally recommend as the next line of treatment for a younger patient with AML and a <u>FLT3-ITD</u> <u>mutation who is eligible for intensive chemotherapy</u> and has experienced disease progression after 7 + 3 with midostaurin?

Dr Daver	Venetoclax + gilteritinib +/- azacitidine or FLAG-IDA + gilteritinib	Dr Pratz	Azacitidine + venetoclax + gilteritinib
Dr Fathi	HMA + gilteritinib	Dr Stein	Gilteritinib
Dr Olin	Gilteritinib, or would consider FLAG-IDA + venetoclax	Dr Stock	Gilteritinib
Dr Pollyea	Gilteritinib	Prof Wei	Azacitidine + venetoclax + gilteritinib

Regulatory and reimbursement issues aside, what would you generally recommend as the next line of treatment for an older patient with AML and a <u>FLT3-ITD mutation</u> <u>who is not eligible for intensive chemotherapy</u> and has experienced disease progression after 7 + 3 with midostaurin?

Dr Daver	Venetoclax + gilteritinib +/- azacitidine	Dr Pratz	Gilteritinib
Dr Fathi	HMA + gilteritinib	Dr Stein	Gilteritinib
Dr Olin	Gilteritinib	Dr Stock	Gilteritinib
Dr Pollyea	Gilteritinib	Prof Wei	Azacitidine + venetoclax + gilteritinib

Regulatory and reimbursement issues aside, what would you generally recommend as the next line of treatment for a younger patient with AML and an <u>IDH1 mutation</u> <u>who is eligible for intensive chemotherapy</u> and has experienced disease progression after venetoclax/azacitidine?

Regulatory and reimbursement issues aside, what would you generally recommend as the next line of treatment for an <u>older patient</u> with AML and an <u>IDH1 mutation</u> <u>who is not eligible for intensive chemotherapy</u> and has experienced disease progression after venetoclax/azacitidine?

Dr Daver	Azacitidine + venetoclax +/- ivosidenib	Dr Pratz	Ivosidenib
Dr Fathi	Ivosidenib	Dr Stein	Ivosidenib
Dr Olin	Ivosidenib +/- decitabine	Dr Stock	Ivosidenib
Dr Pollyea	Ivosidenib	Prof Wei	lvosidenib + venetoclax

Regulatory and reimbursement issues aside, what initial treatment would you recommend for a <u>younger patient who is eligible for intensive</u> <u>chemotherapy</u> who presents with AML and an <u>IDH2 mutation</u>?

Regulatory and reimbursement issues aside, what initial treatment would you recommend for an <u>older patient who is not eligible for intensive</u> <u>chemotherapy</u> who presents with AML and an <u>IDH2 mutation</u>?

HMA: azacitidine or decitabine

Regulatory and reimbursement issues aside, what would you generally recommend as the next line of treatment for a <u>younger patient</u> with AML and an <u>IDH2 mutation who is</u> <u>eligible for intensive chemotherapy</u> and has experienced disease progression after venetoclax/azacitidine?

Regulatory and reimbursement issues aside, what would you generally recommend as the next line of treatment for an <u>older patient</u> with AML and an <u>IDH2 mutation who is</u> <u>not eligible for intensive chemotherapy</u> and has experienced disease progression after venetoclax/azacitidine?

Dr Daver	Azacitidine + enasidenib +/- venetoclax	Dr Pratz	Enasidenib
Dr Fathi	Enasidenib	Dr Stein	Enasidenib
Dr Olin	Enasidenib +/- decitabine	Dr Stock	Enasidenib
Dr Pollyea	Enasidenib	Prof Wei	Enasidenib + venetoclax

Regulatory and reimbursement issues aside, what initial treatment would you recommend for a <u>younger woman who is eligible for intensive chemotherapy</u>, who has a history of breast cancer for which she received adjuvant anthracycline chemotherapy and who now presents with AML with no actionable mutations?

Dr Daver	CPX-351 or FLAG-IDA + venetoclax	Dr Pratz	Azacitidine + venetoclax
Dr Fathi	CPX-351 if anthracycline dose cap not reached	Dr Stein	CPX-351
Dr Olin	CPX-351	Dr Stock	CPX-351
Dr Pollyea	CPX-351	Prof Wei	Azacitidine + venetoclax

Regulatory and reimbursement issues aside, what initial treatment would you recommend for an <u>older woman who is not eligible for intensive chemotherapy</u>, who has a history of breast cancer for which she received adjuvant anthracycline chemotherapy and who now presents with AML with no actionable mutations?

Dr Daver	Azacitidine + venetoclax or CC-486 + venetoclax	Dr Pratz	Azacitidine + venetoclax
Dr Fathi	HMA + venetoclax	Dr Stein	Azacitidine + venetoclax
Dr Olin	HMA + venetoclax	Dr Stock	Azacitidine + venetoclax
Dr Pollyea	Azacitidine + venetoclax	Prof Wei	Azacitidine + venetoclax

HMA: azacitidine or decitabine

Optimal Management of Newly Diagnosed Acute Myeloid Leukemia (AML) Not Eligible for Intensive Therapy

Venetoclax Mechanism of Action

- Cancer cells increase the expression of anti-apoptotic proteins to offset the increase in pro-apoptotic proteins, tipping the balance toward cell survival
- The large # of pro-apoptotic proteins bound and sequestered by Bcl-2 in AML make them "primed" for death

VIALE-A Study Design

(NCT02993523)

* 2 patients were not stratified by cytogenetic risk. They were excluded from efficacy analysis but included in the safety analysis. 6 patients who did not receive treatment were excluded from the safety analysis set.

AML: Acute myeloid leukemia; CHF: Congestive heart failure; CNS: Central nervous system; CR: Complete remission; CRi: CR+ incomplete marrow remission; CRh: CR+ incomplete hematologic recovery; DCLO: diffusion lung capacity for carbon monoxide; ECOG: Eastern Cooperative Oncology Group; FEV1 : Forced expiratory volume; HMA: Hypomethylating agent; NCCN: National Comprehensive Cancer Network

Positive Top-Line Data from the Global Phase III Study of Ivosidenib in Combination with Azacitidine for Previously Untreated AML with an IDH1 Mutation

Press Release: August 2, 2021

"The global Phase 3 double blinded placebo controlled AGILE study of ivosidenib in combination with the chemotherapy azacitidine in adults with previously untreated IDH1mutated acute myeloid leukemia (AML) met its primary endpoint of event-free survival (EFS). Treatment with ivosidenib in combination with azacitidine compared to azacitidine in combination with placebo demonstrated a statistically significant improvement in EFS. Additionally, the trial met all of its key secondary endpoints, including complete remission rate (CR rate), overall survival (OS), CR and complete remission with partial hematologic recovery rate (CRh rate) and objective response rate (ORR).

The safety profile of ivosidenib in combination with azacitidine was consistent with previously published data. The study recently halted further enrollment based on the recommendation of the Independent Data Monitoring Committee (IDMC), as a difference of clinical importance was noted between the treatment groups."

https://www.prnewswire.com/news-releases/servier-announces-positive-topline-data-from-the-global-phase-3-study-of-tibsovo-ivosidenib-tablets-in-combination-with-azacitidine-in-patients-with-previously-untreated-idh1-mutated-acute-myeloid-leukemia-301345783.html

VIALE-A: Outcomes with Venetoclax + Azacitidine for AML with IDH1/2 Mutations

Phase Ib/II Study of Ivosidenib with Venetoclax with or without Azacitidine in Patients with Myeloid Cancer and an IDH1 Mutation

 3 x 3 dose escalation/de-escalation study exploring 4 dose levels in 25 patients with advanced MDS or MPN or newly diagnosed or R/R AML

Commonly Observed and Noteworthy IDH Inhibitor-Related Adverse Events (AEs)

Commonly Observed Treatment-Emergent AEs (Any Grade, >20%)

- Enasidenib: Hyperbilirubinemia, nausea
- **Ivosidenib:** Diarrhea, leukocytosis, nausea, fatigue, febrile neutropenia, dyspnea, anemia, QT prolongation, peripheral edema

Noteworthy Grade 3 and 4 AEs

- IDH differentiation syndrome: 5%-6%
- Prolongation of the QT interval
 - Enasidenib: Not reported
 - Ivosidenib: ~8%
- Leukocytosis: 2%-3%
- Hyperbilirubinemia
 - Enasidenib: 12%
 - Ivosidenib: Not reported

IDH Differentiation Syndrome (IDH-DS)

- Potentially fatal complication of effective leukemia treatment
 - First described in patients with APL treated with ATRA
- Signs and symptoms of IDH-DS not specific
 - Fever, edema, weight gain, leukocytosis, rash, hypotension, renal dysfunction, and pleural and pericardial effusions
 - A rising leukocyte count, comprising increasing neutrophils with a parallel decrease in leukemic blasts
- Median time to onset: ~30 days (range: 5-340 days)
- Frequency: 5%-6% Grade 3 or higher
 - Frequent dose interruptions but not associated with treatment discontinuation
- Treatment
 - Corticosteroids for IDH-DS
 - Hydroxyurea for leukocytosis, which frequently accompanies IDH-DS
 - Hyperuricemia agents for tumor lysis syndrome, which may co-occur

AML-MRC: AML with MDS-Related Changes

Definition: AML with a history of MDS or myelodysplasia-related cytogenetic findings, specifically ≥ 20% blasts in the peripheral blood or bone marrow and any of the following:

- Previously documented MDS or MDS/MPN
- Myelodysplasia-related cytogenetic abnormalities

- Morphologic detection of **multilineage** dysplasia

 Complex karyotype (3 or more abnormalities).
Unbalanced abnormalities: -7/del(7q), del(5q)/t(5q), i(17q)/t(17p), -13/del(13q), del(11q), del(12p)/t(12p), idic(X)(q13).
Balanced abnormalities: t(11;16)(q23.3;p13.3), t(3:21)(q26.2;q22.1), t(1;3)(p36.3;q21.2), t(2;11)(p21;q23.3), t(5;12)(q32;p13.2), t(5;7)(q32;q11.2), t(5;17)(q32;p13.2), t(5;10)(q32;q21.2), t(3;5)(q25.3;q35.1)

Footnote 1. The presence of 50% or more dysplastic cells in at least 2 cell lines, **excluding cases when a mutation** of NPM1 or biallelic mutation of CEBPA is present.

Therapy-Related AML

The WHO defines t-AML as AML that arises from prior cytotoxic therapy or ionizing radiotherapy for an unrelated disease. Estimated to account for 5-10% of all AML cases.

Phase III Trial of CPX-351 versus 7 + 3 Cytarabine and Daunorubicin for Older Patients with Newly Diagnosed High-Risk or Secondary AML

Meet The Professor Optimizing the Clinical Management of Hodgkin and Non-Hodgkin Lymphomas

Wednesday, December 15, 2021 5:00 PM – 6:00 PM ET

> Faculty Brian T Hill, MD, PhD

> > Moderator Neil Love, MD

Thank you for joining us!

CME and MOC credit information will be emailed to each participant within 5 business days.
